Cornwall Insight’s Energy Market Bulletin (CI EMB) is designed for generators, suppliers, asset investors, large energy users and other players with interests in the GB wholesale energy market.

The CI EMB brings transparency to the market, covering the latest trends in power, gas and international commodity prices. It will help you understand the factors that influence prices, dynamics in energy supply and demand, generation, and key market events.

### Key Components of CI EMB

#### Market outlook
A consolidated outlook on the market fundamentals that will influence wholesale power and gas prices, including supply and demand, commodities, weather forecasts and economics.

#### Power market
A review of the previous week’s pricing including near-term and seasonal power contracts, an overview of recent supply and demand trends and what to expect in the week ahead, and a summary of international power price movements.

#### Gas market
Assessment of the influences on the National Balancing Point (NBP) gas market, including supply and demand, international gas prices, temperature forecasts and recent trends in the global LNG market.

#### Commodity markets
Analysis of Brent crude oil, API 2 coal and EU ETS carbon, and how the commodities feed into the GB wholesale market.

### The CI EMB Service

#### Overview
The CI EMB service is designed to allow subscribers to make sense of a complex and dynamic market. It focuses upon the fundamental drivers of the market, enabling customers to form a consolidated view and identify potential opportunities, risks or strategies. The service includes:

#### Regular insights
Weekly report - A weekly bulletin is sent every Monday morning detailing trends and providing an outlook for wholesale power, gas and international commodity markets.

Monthly webinar - The webinar consolidates and builds upon the information covered in the weekly reports.

#### Succinct and comprehensive insight
The report combines visual data representations of market and commodity pricing allied with focused interpretation of those dynamics. The report looks back on the preceding week’s trading activities and looks forward at likely movements in prices and market inputs in the forthcoming week.
Benefits of CI EMB
