
Renewables Pipeline Tracker

Cornwall Insight renewables pipeline tracker service is designed for developers, investors, generators, renewable offtakers and advisors in the GB energy market.

The service provides detailed information on future renewables generation assets, informed by our unrivalled market coverage and understanding of the regulatory, policy and commercial barriers these assets have to overcome. Providing greater transparency to development market, coverage includes development stage of projects by technology type, locational views on development by region, ownership structures and market share of developers, and financing structures and PPA/route to market decisions.

KEY COMPONENTS

A searchable and accessible database

An accessible database of all tracked projects covering key metrics such as size, technology, location and anticipated network connection level, anticipated commissioning date, ownership and sponsors and routes to market and PPA decisions. Updated quarterly to provide the latest project developments.

Accompanying analysis report

Providing Cornwall Insight views on key developments and significant trends observed across the pipeline. This includes key case studies and technology focuses each issue on aspects such as the CfD eligible pipeline, offshore wind competition and trends for co-location of renewables.

THE SERVICE

Overview

Split into two key aspects, a database of all projects and an accompanying analysis report, the service is designed to provide detailed information on future renewables generation assets and provide transparency to the market.

Updates are issued quarterly, with special feature case studies analysed to provide a detailed view on developments within technologies and types of asset.

The searchable database provides subscribers with a wealth of information on projects and their current development status and activity. With over 800 unique project entries, organisations from across the industry can access the latest information and project updates.

The analysis report also provides subscribers with streamlined and succinct summary of the pipeline, digesting the key information and providing this in a clear and visually impressive format to be used directly in the business.

The aim of the service is to provide key information to help inform business planning and ultimately the business decisions of investors, developers and advisors to the renewables community.

Benefits

The renewables pipeline tracker provides our clients with unparalleled insight into the development pipeline for new build and repowering renewables generation assets

Activity it supports	Benefits	Who uses it
Competitor intelligence	<ul style="list-style-type: none">- Access to projects in development and organisations sponsoring these.- Key insights on who is providing PPA options and wider project support such as turbine delivery.	<ul style="list-style-type: none">- Developers- Investors- Generators- Renewable offtakers- Advisors
Business planning and strategy	<ul style="list-style-type: none">- Discover which projects are expected to develop in the coming years and how they are expected to do so.- Shape your business activity to when generators, certain technologies or stakeholders are expected to become activity.	
PPA and routes to market decisions	<ul style="list-style-type: none">- See the latest statistics and evidence on how generators are coming to market through the CfD or subsidy free routes.- Assess how these options are developing and which may be best suited for your project.	
Case study analysis and assessment	<ul style="list-style-type: none">- Technology focusses each issue including offshore wind, fuelled renewables and co-location trends to provide detailed analysis and additional insights
