

**Cornwall Insight Ireland's Route to RESS service is designed for renewable project developers and investors, energy suppliers and professional service companies.**

Our service deploys insight to help participants navigate through the RESS-2 auction process. It comprises of a set of tools to assist the market entry and auction process including, analysis of the competitor landscape, intelligence around bid pricing, forward power curves and bespoke advisory services.

With new entrants, strong competition likely and the detail of the second RESS auction now fully understood. We will work with you to provide the key insights and understanding to succeed in the auction.

## Route to RESS service

### Pipeline tracker

Continuously updated register of likely bidders on a project specific level, providing data for effective competitive analysis and formulation of bidding strategy.

### Auction simulation model

RESS-2 Auction model using Cornwall Insights All Island Forward Curve, assumptions on project costs and Pipeline Tracker, which creates a range of bid prices for projects. Our Auction Simulation Model provides a breakdown of each projects bid attributes along with which projects were successful.

### All Island forward curve

Provides a base case scenario from our wholesale forward curve, providing projections of wholesale electricity market prices up to 2050, including negative price projections and capture prices by technology.

### Bidding strategy workshop

Workshop via video conference, in order to work through the outputs, helping you identify potential risks to your bid and discuss the potential of your project securing a contract.

## Our modelling capabilities

Since 2005 Cornwall Insight has become one of the most respected voices in the energy industry, with more than 80 expert energy enthusiasts delivering excellence in two continents. We create clarity in complex markets and guide clients through markets beset by widespread regulatory and policy change.
